PS Claim 7a; Page 99-100; 142pp; English.

XX

CC This invention describes novel human secreted proteins encoded by
 CC polynucleotides isolated from human adult testes, adult brain, adult
 CC blood or adult placenta, or murine adult bone marrow or thymus cDNA
 CC libraries. The products of the invention are predicted to have biological
 CC activities which would make them suitable for treating, preventing or
 CC ameliorating medical conditions in humans and animals, although no
 CC supporting data is given. Suggested activities include nutritional
 CC activity, cytokine and cell proliferation/differentiation activity,
 CC immune stimulating (e.g. as vaccines) or suppressing activity,
 CC haematopoiesis regulating activity, tissue growth activity,
 CC activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
 CC and thrombolytic activity, receptor/ligand activity, anti-inflammatory
 CC activity, cadherin/tumour invasion suppressor activity, and tumour
 CC inhibition activity. The polynucleotides are also stated to be useful for
 CC gene therapy
